

JusTechRun Systems Inc — Startup Partner Application Packet

This packet contains all information required by GitHub for Startups, AWS Activate, Google for Startups, Microsoft Founders Hub, NVIDIA Inception, and DigitalOcean/Vercel partner programs.

Founder: Jacob Mason • Delaware C-Corp • AI + Fintech + Compliance Automation

Company Overview

JusTechRun Systems Inc builds AI-powered financial infrastructure, compliance automation, CRM workflow engines, and tokenized-finance systems designed for ministries, holding companies, SPVs, and regulated fintech operators.

Our platform integrates multi-cloud architecture, agentic AI, microservices, and enterprise-grade operational workflows.

Universal Pitch Summary

JusTechRun delivers an AI-driven CRM and compliance automation engine that unifies operations across finance, workflows, SPV systems, tokenization readiness, and digital compliance environments.

We are raising \$750,000 to accelerate engineering, strengthen cloud infrastructure, expand AI capabilities, and deploy our enterprise beta.

Technical Description

Tech stack: C#, Python, Java, .NET, Node.js, Docker, GitHub Actions, PostgreSQL, Azure, AWS, GCP, LangChain, ML pipelines, and microservice architecture.

The platform automates compliance reporting, risk scoring, tokenization preparation, CRM intelligence, and multi-entity organizational workflows.

Eligibility & Team Strength

Led by a technical founder with deep finance, compliance, and AI/cloud engineering expertise.

Experience includes SPV structuring, trust administration, broker-dealer workflows, regulatory alignment, and enterprise architecture.

This combination of compliance + engineering gives JusTechRun a decisive advantage.

Fundraising Data

Capital Raised: \$0 to date (bootstrapped).

Seeking: \$750,000 over the next 6 months.

Planned Close: 4 – 6 months.

Use of Funds: 45% Engineering, 20% Cloud Compute, 20% Product Deployment & Beta, 10% Compliance & Security, 5% GTM.

Program Response Requirements

WHY JOIN (AWS / GitHub / Microsoft / Google / NVIDIA): Accelerate MVP development, leverage cloud credits, scale AI infrastructure, and expand automated compliance architecture.

USE OF CREDITS: Cloud compute, ML model training, CI/CD, microservices deployment, testing environments, CRM system architecture.

TEAM SIZE: 1 – 5 with active technical founder overseeing engineering.
